CARE & USE

Wash and dry

Before the first use, remove labels, wash the dish in hot, soapy water, and rinse and dry thoroughly. For most day-to-day cleaning, cool the empty dish for a few minutes before washing and drying. Never leave a dish fully immersed in water. For removal of stubborn residues allow the dish to cool, fill with warm, soapy water and allow it to soak for 10 to 20 minutes. Wash in the usual way using a plastic brush or sponge scouring pad if necessary.

Make the perfect coffee

How much coffee should I use?

Use special made presso-coffee to make the coffee. Fill the jug with coffee to about a quarter of the size of the jug.

Hot water

Fill the jug with 90-96 degree warm water. The trick is to take the water just before it starts to boil. Fill up half way and whisk then add the rest of the water and whisk again.

The magic 4-minute-rule

Let the coffee sit with the lid on for exactly 4 minutes then slowly press the knob downwards. Your coffee is ready to be served!
